

KOHSHIN ELECTRIC'S ENVIRONMENTAL POLICY

ENVIRONMENTAL PHILOSOPHY

Under the international philosophy of "sustainable growth", we, Kohshin Electric, promote the harmonization of natural environment and local communities and the realization of environmentally friendly products and factories. To this end, we strive to conserve and improve the environment by utilizing proprietary and new technologies as well as through all our business activities and employees' conduct.

GUIDELINES FOR ENVIRONMENTAL ACTIONS

We manufacture current sensors, measuring devices, power equipment, magnetic devices and other products, and supply them widely to domestic and overseas markets.

In this sense, we play an important role in contributing to nature positive by conserving biodiversity, as well as realizing carbon neutrality and a circular economy through efficient energy use such as power saving.

Particularly, we regard environmental contribution as one of the most important issues in its business activities, and challenging itself will create new value in as to solve various environmental problems such as climate change, resource depletion, and biodiversity loss, thereby contributing to the realization of a sustainable future.

In accordance with the "Environmental Vision 2050," we will provide products and services that contribute to "measures against climate change" and "creation of a circular society" through the following environmental activities, also challenging ourselves to innovate for the next generation and propose new value.

1. We would strive to protect biodiversity by accurately understanding the impact that our business activities, products, and services effect to the environment, preventing pollution before it occurs, and continually improving our environmental conservation activity systems and environmental performance.
2. We organize ourselves to reinforce the activities for environmental issues and maintain or even improve the environmental management system through self-management activities.
3. We raise awareness of environmental issues, by making our environmental policy fully known to all personnel working for our organization through environmental education and internal PR activities.
4. We comply with environment-related regulations, ordinances of prefectures, cities and towns and other requirements we agree to. Furthermore, we establish our own standards to the extent technically and economically feasible, and work to improve the environmental management levels.
5. Actively introduce environmentally friendly manufacturing techniques, resource saving processes, and information technologies to promote the reduction of environmental impacts such as energy and waste, also strive to continually improve environmental performance.
 - (1) In order to achieve carbon neutrality, we continue to promote the introduction of highly efficient facilities and equipment, improve productivity, and implement ecological management to conserve energy and reduce CO2 emissions.
 - (2) In order to reduce environmental impacts, promote waste reduction, reuse, and recycling, and strive for effective resource use.
 - (3) In order to protect the living environment of the local community, strive to properly manage chemical substances.
 - (4) Strive to create eco products that reduce or propose reductions in environmental impacts, taking into consideration the entire process from raw material procurement to disposal.
6. We continue green procurement that reflects the environmental consideration of procurement materials and products and the environmental activities of suppliers.
7. We communicate with relevant authorities, local resident and customers, and provide accumulated technologies and information related to the environment widely.
8. To achieve this environmental policy, we set environmental targets and put concrete activities as well as follow-up measures into practice.
9. We make this environmental policy available to all the parties involved in our business activities.
